Known Issues
Following is a description of known issues that are scheduled to be remedied in an upcoming release.

MP Install
- The MP3 player user interface in MP Manage is inconsistent with that in MP Install.
- There is inconsistency between the gain reduction meter on the Overview screens and the gain reduction meter on the AGC screen.
- When working with the GPI "Recall Scene" selection window scrolling may lock up when being simultaneously controlled by two Windows computers. Windows only.
- When a scene is saved, the "Recall Omits – Levels & Sources and Outputs" switches may reset. Windows only.
- When the Cue Fader control pop-up displayed over "Music on Hold" and "USB Player screens, moving the Cue Fader may change a selection on the underlying screen. iOS only.
- When working with the MFC window, touching the Reset button will reset the MFC but the previous name will be retained on the MFC screen.
- In the Report, data entered into a field immediately before touching "Generate Report" is not captured by the report. It is necessary to touch Enter on the keyboard before generating a report.
- When controlling the app remotely from a second PC, the app may freeze. Windows only.
- If a Reset is performed when the app is in offline mode, connected MP-Ms may no longer be displayed in the "Resolve Window". Connectivity may be restored by closing and re-launching the app.
- When the mixer is given a name that includes a space, the space is displayed as a square. Windows only.
- In "System Test" both channels of linked zones do not show as being selected even though the test signal is sent to both.
- Copy / Paste function does not work between 2-Trk Playback and Wi-Fi paging.
- In the weeds

- If the mixer is renamed, the new name may take some time to be updated in the mixer name tab at the lower right corner of the app.

MP Manage

- The MP3 player user interface in MP Manage is inconsistent with that in MP Install.
